

ISO 17034 Accreditation

Elemental Microanalysis has achieved ISO 17034:2016 accreditation for the production of certified reference materials (CRMs).

In a competitive market, this accreditation is a key quality differentiator and endorsement of the value we offer our customers. Certified reference materials (CRMs) are produced to this accreditation to provide additional international confidence in the quality and competence of their preparation.

About ISO 17034

This standard requires CRM producers to conform to technical and production requirements including: the assessment of homogeneity; assessment and monitoring of stability; characterisation; assignment of property values and their uncertainties; and integrity of these metrological traceable certified values.

This accreditation is reviewed constantly, and technical experts ensure full compliance to the standard to ensure the accreditation, and therefore the CRMs produced, are still valid.

Elemental Quality

ISO 9001:2015 ISO 17025:2005 ISO 17034:2016

At Elemental Microanalysis we pride ourselves on manufacturing products of excellent quality and value; that is why our accreditations are so important to us.

Our manufacturing processes, products and analytical services undergo regular and rigorous evaluation from independent quality accreditation organisations. Each of our accreditations are explained below.
