

## Product Information

### Big tools for bigger samples

We've expanded our range of useful laboratory tools for working with larger sample sizes.

Agricultural and food analysis typically requires samples with a volume of 785µl or greater; these are simpler and more efficient to handle with tools capable of containing and transferring bulkier volumes.

You can find out more about our growing product range for Macro and Nitrogen/Protein analysis in our newly released Macro catalogue.

These products offer the same high quality and value for money that is typical of Elemental Microanalysis' entire product range.

Available to order from our [ISO 9001](#) factory online, by email, telephone or fax. Elemental Microanalysis offers extensive knowledge of analysis, over 40 years of experience and a worldwide reputation for excellence.
